# HOWARD LIGHTING PRODUCTS

#### MOUNTING:

1. Securely attach mounting brackets (2) to mounting surface (brackets can be surface, chain, or cable mounted). The VSAx enclosure will engage the mounting brackets at any point along the fixture's length, except where there are latches. It is recommended that the distance between brackets equal 70 - 80% of the fixture's length.

Mounting Brackets

## 2. Insert one side of the fixture into mounting brackets. 4. Verify that the enclosure is fully supported before connecting to a power supply. WIRING CONNECTIONS: (Use only approved connectors for all electrical connections.) 1. VSAx Series Strips utilize a geartray that is supported by two/three retaining clips. To open wiring compartment, depress clips and push them through the geartray. There are hooks on the retaining clips from which the geartray can hang. Geartray should be "eased" down; DO NOT allow the geartray to 'drop free' and swing. 2. Connect the black fixture wire to the black supply wire (line). 3. Connect the white fixture wire to the white supply wire (neutral). 4. Connect the supply ground wire to the green fixture wire (or GRD screw if provided). 5. Ballast Voltage: This fixture is typically provided with a multi-volt ballast (120-to-277v), but may have a single tap ballast (such as 120v only). Ensure that the supply voltage is correct for the ballast in this fixture. Instructions Continued on Reverse.

# VSAx Series Vaporproof **Fluorescent Strip** INSTALLATION INSTRUCTIONS

# WARNING:

Disconnect power during installation and before servicing. Wear gloves to prevent cuts/abrasions from sharp edges when removing from carton, handling, and maintaining this fixture.

This fixture must be wired in accordance with the National Electric Code and applicable local codes or ordinances. All work should be performed by a qualified electrician. To insure personal safety, proper grounding is required (connect green fixture lead to supply ground).

# **IMPORTANT:**

Read all instructions carefully before attempting installation. If you do not understand these instructions, please consult your local distributor.

Thoroughly inspect the fixture for any freight damage; freight damage should be reported to the delivery carrier.

### MOUNTING (cont):

3. Push up on fixture and press in on the mounting bracket until the mounting bracket snaps into place.

<ol> <li>Reinstall the geartray; carefully placing it back into the retaining clips insuring that no wiring is pinched. <u>Remove protective film from reflector (if</u> provided).</li> <li>Install fluorescent lamps. Insert each lamp into sockets and turn until the lamp 'snaps' into place. If lamp replacement is necessary, insure that the lamp is the same wattage and type as indicated on the ballast label.</li> <li>Replace the lens ensuring that all latches are fully engaged.</li> <li>TOUBLESHOOTING TIPS: If the fixture fails to oper / Verify the correct lamp type is used and properly installed.</li> <li>Verify proper line voltage is present.</li> <li>Verify proper line voltage is present.</li> <li>Verify that the fixture geartray is grounded.</li> </ol> MARNING: Improper seating of lamps can create a f ensure lamp position is correct before energizing fixture. See Diagrams 1 and 2.	NG VAPOR-TIGHT SEAL: ure that all latches are fully engaged. or-tight bonding between conduit and connections of automatic and must be provided as a part of the allation.
